CUNJINDI / EXPORT DESK

# Yunnan blueberry

Plan the winter programme around your customers and delivery window

## EXISTING PRODUCT REFERENCE

| | |
|---|---|
| **Growing regions** | Xishuangbanna, Honghe and Chengjiang, Yunnan, China |
| **Usual season** | December - May; typical peak January - April. This is a planning reference, not confirmation of current stock. |
| **Catalogue format** | 15 - 26 mm fruit; 125 g punnet / 4, 6 or 8 punnets per box. Actual size distribution and packing are agreed for the selected lot. |

## BUILD A REQUIREMENT FOR YOUR CHANNEL

Tell us whether the fruit is for retail punnets, wholesale distribution, foodservice or another channel. We can discuss grade, packing and labels against your specification.

## THREE DETAILS TO START

1. What is the expected first-order or weekly volume? Please include units.
2. Which arrival window and destination port, airport or city?
3. Which size/packing format and buyer-specific tests or qualifications are essential?

The supplier confirms GLOBALG.A.P. for its blueberry farms. Certificate documents are not shared externally; this is separate from the citrus certificate published on this site. Buyer-specific testing and qualification requirements are discussed before an order.

Variety, samples, current availability, price, transport and shipment dates require order-specific confirmation.

**Send your requirements in your usual format.**
